

ABSTRACT OF THE DISCLOSURE

1. A silver halide color photographic
 light-sensitive material comprising a support and,
 superimposed thereon, at least one blue-sensitive
 5 layer, at least one green-sensitive layer, at least one
 red-sensitive layer and at least one non-light-sensitive
 layer, wherein at least one fluorinated surfactant
 represented by the following general formula (A) or
 general formula (B) is contained and wherein a spectral
 10 sensitivity ratio at 370 nm as compared to that at 420
 nm, which imparts the same density as that of the
 sensitivity at 420 nm in the spectral sensitivity
 distribution of the blue-sensitive layer, is 70% or
 less.
